RE: Request for Computer Server, Environmental Health GIS projects

The stormwater management program (SWMP) formally requests to acquire and utilize a computer server for the GIS data system currently in use. The acquisition of a server dedicated to the use of the GIS systems will increase efficiency, enhance accessibility, store and protect projects and data in use on the system. Currently the SWMP is utilizing GIS software on two desk top computers, with all of the data and current projects being stored on only one of the hard drives. If that particular hard drive should experience a catastrophic failure, all of the data, projects and work will be lost. Currently there is no mechanism to back-up the information onto an external hard drive or any other device. Daily work activities by the SWMP on the GIS system are greatly hindered due to the lack of a server. A server will allow the SWMP staff to work jointly on a project at the same time without requiring the other computer to stop work. Due to utilizing one hard drive and having to set up a file share through the network, only one operator may edit a program at a time, resulting in down time for the other operator and loss of productivity.

Designating a server for the GIS system will also allow for GIS work in the Epidemiology department to be stored and shared amongst their staff. A designated GIS server will also allow for expansion of GIS services within the TLCHD as well as disseminating information from the internet for public viewing of current and future projects if desired.

Sincerely,

Eric Zgodzinski, MPH, RS, CPH
