

STORM WATER CREDIT APPLICATION

I. Introduction:

The purpose of the Storm Water Credit Program and this application is to provide a vehicle and incentive to non-residential property owners and regional residential property owners who conduct good stewardship practices that benefit the operation and maintenance of the Lucas County's storm water collection system and improve water quality. The benefit to the property owner is a reduction in the storm water service charge as a result of performing an activity or experiencing an actual cost to reduce flows or improve the quality of runoff from their properties that ultimately flows into the Lucas County storm water collection system. The concept is that the entire community benefits from these enhancements or improvements to the County's storm water system through the resulting improvements in water quality and through reduced flooding.

The property owner/customer can reduce the amount of water quality charges being assessed to their respective property by performing activities that reduce storm water volume and improve downstream stormwater quality. Credits are offered for performing the following activities:

- Reducing the impact of stormwater (either quantity or quality) for a particular property to an acceptable standard; and/or
- Reducing the stormwater cost of service to the County by performing activities on accepted properties that otherwise would have to be performed by and be the responsibility of County staff.

Once a credit is established and approved by County staff, an annual maintenance update will need to be submitted by the property owner/customer as an on-going verification that the Best Management Practices or BMPs are being maintained and are in good working order.

Additionally, a potential credit may be available as a one-time reduction for a single action on a case-by-case basis. However, this type of credit is extremely rare.

Each of the credits offered by the Lucas County 6117 Storm Water District's stormwater program are based on two primary stormwater management standards. We encourage you to use the two primary documents as baseline guidelines for preparing your credits application, as follows:

1. The Lucas County 6117 Storm Water District Sub Division Regulations; and
2. It is suggested that you obtain a copy of "*Rain Water and Land Development*", Ohio's Standards for Stormwater Management Land Development and Urban Stream Protection for support documentation from the Ohio Department of Natural Resources, Division of Soil and Water Conservation, Fountain Square Court, Columbus, Ohio 43224 (614) 265-6610 or fax (614) 262-2064. (You can call and order and they will bill you later). You may also download for free at the following location:
<http://www.dnr.state.oh.us/tabid/9186/default.aspx#Manual>

II. Credit Application Procedures:

Submit this Application and Annual Reports via email or snail mail to the following:

Lucas County Engineer's Office
6117 Storm Water District
One Government Center Suite 870
Toledo, Ohio 43604
Phone: (419) 213-4540
<http://www.co.lucas.oh.us/engineer/stormwaterutility>

The credits offered by the Lucas County Storm Water District program are based on the following baseline guidelines. It is recommended reviewing this information when preparing your credits application:

1. Current "state of the art" evaluation;
2. The Lucas County 6117 Storm Water District Sub Division Regulations
3. It is suggested that you obtain a copy of "*Rain Water and Land Development*", Ohio's Standards for Stormwater Management Land Development and Urban Stream Protection for support documentation from the Ohio Department of Natural Resources, Division of Soil and Water Conservation, Fountain Square Court, Columbus, Ohio 43224 (614) 265-6610 or fax (614) 262-2064. (You can call and order and they will bill you later). You may also download for free at the following location:
<http://www.dnr.state.oh.us/tabid/9186/default.aspx#Manual>
4. The Lucas County Storm Water District staff will adhere to the following protocol for property owners that are approved for and accepted into the Storm Water Credits Program:
 - ◆ The credit policy applies to both new and existing facilities.
 - ◆ Credits will be applied in no less than 5% increments at the discretion of Water Quality Program staff.
 - ◆ Each property will be limited to a maximum of 50% total credit per property.
 - ◆ County Staff will perform inspections on at least 20% of parcels receiving credit per year. This will allow staff to inspect 100% of the parcels receiving credit every 5 years.
 - ◆ The Storm Water Credit Program will calculate the credit reduction on an annual basis just as the service charge is calculated annually and billed every six months on the January and July property tax bills.
 - ◆ The credit application will require submittal by no later than May 1st of each year and approval by no later than July 1st to become effective for the following January billings. (For example, a credit application submitted for review on May 1st 2012 will be reviewed by July 1st 2012 and will appear on the January 2013 Auditors property tax bill.
 - ◆ For the reduction in the storm water fee to be maintained through the next fiscal year, and subsequent fiscal years, maintenance documentation must be submitted by May 1st of each year in order for the credit to apply for the following year. If documentation is not received by the due date, the County reserves the right to revoke the credit for the applicable year. Upon receipt of sufficient documentation, the County may reinstate the credit for the following year.
5. To encourage early participation in the Credits Program, the application fee will be waived for applications received prior to or on December 31st, 2012. Starting January 1st 2013, a \$250.00 processing fee will be required for each credit application.
6. Provide a set of design drawings and calculations of the property water quality benefit, as prepared and sealed by a Private Registered Professional Engineer.
7. Construct the management facility in accordance with the plans, specifications and calculations.

8. Provide regular maintenance for the facility in accordance with a suitable maintenance plan to be included with the application.

III. Application Data Requirements:

Supporting data is needed to support each credit applied for. The type of supporting data varies depending on the type of credit requested as shown in the table below.

Supporting Data Requirements:

The following is a list of potential supporting data that will be required with your credit application submittal. Please provide as all pertinent information with your application. This will expedite the County's review process of your credit application. You are encouraged to provide additional information that will be appropriate for your property and assist in evaluating your property's credits.

Site Plans and Surveys

- _____ Adjoining lakes, streams, or other major drainage ways
- _____ Existing and proposed contours
- _____ Impervious delineation and labels (buildings, driveways, etc.)
- _____ Drainage area map, including off-site areas draining through the site
- _____ Size and location of all stormwater structures
- _____ Construction Drawings if not previously approved
- _____ Plat Maps
- _____ Private Engineer or Surveyor Stamp
- _____ County Auditor Maps
- _____ Other permits

Calculations

- _____ Hydrologic calculations for undeveloped and developed land uses
- _____ Hydraulic calculations stage-discharge relationships of controls
- _____ Floodplain encroachment calculations

Maintenance Management Plan and Schedule

- _____ Maintenance Management Plan
- _____ Maintenance schedule of all operations that affect the efficiency of the structural control including mowing, sediment removal, cleaning, planting, monitoring, watering, and channel restoration
- _____ Maintenance Agreement

Easement and Deed Restriction for inspection access and long term maintenance of BMP

- _____ Easement
- _____ Deed Restriction
- _____ Other _____(Please describe)

Other Data

- _____ Education Plan
- _____ Adopt A Stream Application
- _____ Clean Up Participation
- _____ Other (Please describe) _____
- _____ Pollution Prevention Plan
- _____ Spill Prevention Control Counter Measures (SPPC)

IV. Credit Example

An example credit calculation is shown in this section that is intended to assist in providing a guide for the preparation of a credit calculation for your specific situation and property.

Example:

A developer has submitted preliminary plans to construct a warehouse on a 10-acre site. The development includes a warehouse, parking lot and a driveway which equals 3 acres of impervious area. He has submitted an application for two credits including a credit for detention/retention and a credit for a riparian water quality buffer.

The County requires that all new development detain the 25 year storm. The owner of the property wishes to exceed the minimum requirement and detain the 50 year storm. The owner also wishes to provide a greenway and walking trail along riffle creek which qualifies as a riparian water quality buffer credit

Given:

- 10 acre site with 3 acres of impervious area (130,680 sq. ft. of impervious area)
- The detention/retention basin receives 100% of drainage from the impervious area
- The riparian water quality buffer and greenway receives 100% of the drainage from the impervious area
- 30% credit available for the greenway which is the riparian water quality buffer
- 30% credit available for the detention pond
- The maximum credit allowed for any property is 50%
- 1 Equivalent Residential Unit or ERU is equal to 5,500 square feet of impervious area
- The rate is \$24.36 per ERU per half (\$4.06 per ERU per month x 6 months)

Step 1: Calculate the estimated impervious area of property prior to awarding the credit.

- 3 acres x 43,560 (sq. ft. in acres) = 130,680 sq. ft. of impervious area
- Calculate the number of ERU's for the example property

130,680 sq. ft. of impervious area divided by 5,500 (ERU) = 23.76 ERUs rounded to 24 ERUs

- Calculate User Fee based on impervious area of property

24 ERUs x \$24.36 = \$584.64 per half (corresponds to 6 month tax billing period)

or (24 ERUs x \$4.06 = \$97.44 per month)

Step 2: Determine amount of impervious area subject to credit

Detention/Retention Basin

Measured Impervious Area or MIA = 130,680 sq. ft. * 100% * 30% = 39,204 sq. ft.

Greenway

MIA = 130,680 sq. ft. * 100% * 30% = 39,204 sq. ft.

Step 3: Determine the amount of ERU's available for credit reduction

Detention/Retention Basin

39,204 sq. ft. / 5,500 = 7.13 rounded down to 7 ERU Credit

Greenway (riparian water quality buffer)

39,204 sq. ft. / 5,500 = 7.13 rounded down to 7 ERU Credit

Total Credit Reduction- 7 ERU + 7 ERU = 14 ERU

Step 4: Determine estimated credit and modified Storm Water service fee

Reduction (\$) = ERU * % Credit * \$24.36/ERU per quarter

14 * \$24.36 = \$341.04

Estimated Storm Water District Bill = \$584.64 – \$341.04 = \$243.60 (reduced Storm Water bill after credit reduction per quarter)

However, all parcels are required to pay no less than 50% of the bill. \$584.64 x 50% = \$292.32. The reduction is maximized at \$292.32 for the semiannual storm water charge.

Please Note: The storm water charge appears on the Real Estate Tax Bill twice per year. Therefore, the credit reduction is calculated on a 6 months basis (first half mailed in January and second half mailed in July to coincide with each of the 6 month tax billing sequence).

V. Instructions for Completing the Application

Section A - Applicant

- Refer to and complete the application contained in the appendix at the end of this document
- Name, address, e-mail and phone number of the person or persons responsible for stormwater charge.
- Parcel Number located on the top right hand side of the Real Estate Tax Bill statement.

Again, we encourage you to use the two primary documents as baseline guidelines for preparing your credits application, including, the 1991 Lucas County 6117 Storm Water District Sub Division Regulations, and it is suggested that you obtain a copy of "Rain Water and Land Development" Ohio's Standards for Stormwater Management Land Development and Urban Stream Protection. These documents will be used as the primary guidelines and documentation to approve your application. In addition, if you have documentation from other states that offer experimental BMP's not listed in this application, the Lucas County 6117 Storm Water District will consider "experimental BMP's that are proven to work as long as the documentation is included as part of your credits application documentation. It will be the responsibility of the parcel owner to provide the documentation necessary to evaluate the "experimental BMP applied for, if applicable.

Section B - Site Information

- Location where credit is to be applied (if the BMP does not pertain to 100% of the parcel).
- Impervious area and ERU's for entire property are based on applicant's estimate (See Part C-Credit Estimation Calculation above).

Section C – Private Engineer/Surveyor of Record (If required by credit)

- Name, address, e-mail and phone number of the Certifying Engineer.
- Certification includes engineers stamp.

Section D - Credit Summary

The Lucas County 6117 Storm Water District staff will review and assign a storm water credit in 5% increments with a maximum of 50% credit to any one property.

1. Permanent Basins Credits

Maximum Credit: 10%

The principle of permanent basin credit is to delay (or in the case of retention completely remove) flows so that their impacts to the drainage system are minimized. This is accomplished through the construction of small ponds or dry ponds that fill up during rainstorms and slowly meter flow downstream. This is the most common form of water quantity management practice and prior to 2003, met requirements for development in Lucas County.

The basis for this credit is the Lucas County Sub Division Regulations Manual. All criteria for the planning, design, construction, operation, and maintenance for these facilities shall be done in accordance with this manual.

Only parcels developed prior to 2003 would be eligible for this credit. After 2003 all new development are required to treat the water quality volume to ensure compliance with Ohio's Water Quality Standards in OAC Chapter 3745-1. The WQv shall be equivalent to the volume of runoff from a 0.75-inch rainfall and shall be determined according to the following equation:

$$WQv = C * P * A / 12$$

Permanent Basins meets minimum standards:

10% Credit

2. Water Quality Credits

Maximum Credit: 50%

The water quality credits are offered to properties that perform an activity or activities that reduce the burden on the water quality system. This will include "natural" as well as manmade water quality system structures that are properly maintained and are operating for the purposes of water quality and water quantity benefits, and to reduce the burden on the County maintained storm system. The basis for this credit is the Lucas County Sub Division Regulations Manual. All criteria for the planning, design, construction, operation, and maintenance for these facilities shall be done in accordance with this manual.

After 2003 all new development are required to treat the water quality volume to ensure compliance with Ohio's Water Quality Standards in OAC Chapter 3745-1. The WQv shall be equivalent to the volume of runoff from a 0.75-inch rainfall and shall be determined according to the following equation:

$$WQv = C * P * A / 12$$

The following is a summary of the final credits that will be offered to the non-residential property owners in the Lucas County 6117 Storm Water District with the attached suggested percent credit reduction which will be ultimately "at the discretion of the Stormwater Utility Department reviewing the credits applications:

	<u>Available Credit</u>	<u>Credit Received</u>
Detention/Retention (Exceeding Standard)	up to 30%	_____
Water Quality Ponds	up to 30%	_____
Vegetated Swales/Grass Filter Strips	up to 30%	_____
Grass Line Conveyance Channels (Dry Swales)	up to 30%	_____
Riparian Water Quality Buffers	up to 30%	_____
Percolation/Infiltration Trenches	up to 30%	_____
Constructed/Artificial Wetland	up to 30%	_____
Porous Pavement	up to 30%	_____
Green Roof	up to 30%	_____
Bioretention/Rain Gardens	up to 30%	_____
Industrial NPDES	up to 10%	_____

- Applicant lists credits being applied for.

3. Regional Residential

Maximum Credit: 30%

Permanent Runoff Control (detention/retention)

The basis for this credit is the Lucas County Sub Division Regulations Manual. All criteria for the planning, design, construction, operation, and maintenance for these facilities shall be done in accordance with this manual.

After 2003 all new development are required to treat the water quality volume to ensure compliance with Ohio's Water Quality Standards in OAC Chapter 3745-1. The WQv shall be equivalent to the volume of runoff from a 0.75-inch rainfall and shall be determined according to the following equation:

$$WQv = C * P * A / 12$$

This credit will apply only to regional residential facilities owned and operated by a homeowners association that are properly operating and properly maintained for subdivision (regional) detention/retention facilities. One and only one credit "payment" will be made to the homeowners association on an annual basis. It will be up to the homeowners association how the credit payment will be allocated back to the individual homeowners. The Lucas County Stormwater District had approved several policies and procedures that does not allow a reduction to the individual residential stormwater charge. All properties receive a minimum of 1 ERU. Under no circumstances will the District allow less than 1 ERU for any parcel. Therefore, reducing individual homeowner's bills will be inconsistent with the overall Lucas County 6117 Storm Water District's stormwater program policies and procedures. This regional residential facilities credit is a special provision that is typically offered only to non-residential parcels.

Detention/Retention (Minimum Standard prior to 2003)	up to 10%	_____
Detention/Retention (Minimum Standard after 2003)	up to 30%	_____

4. Gravel Credit

Maximum Credit: 30%

The Lucas County 6117 Storm Water District considers all compacted gravel areas (drives, storage areas, etc.) as impervious areas, and includes these surfaces in calculating the user fee. The Stormwater District acknowledges that gravel surfaces may allow for the infiltration of stormwater flow in a slightly different manner that concrete (impervious area surfaces). Therefore, an allowance for such credit will be provided on a case by case basis. Non-residential property owners may be eligible for a credit reduction for onsite gravel surfaces. It is up to the owner of these properties to submit documentation that demonstrates on-site gravel is not compacted, not used for vehicular traffic, and not impervious. The credit shall only apply to the gravel area of the property and not all impervious area of the site. Additionally, the County may grant a credit for non-compacted gravel areas used for landscaping or other purposes. The County Engineer will make the decision regarding the intended purpose of gravel areas after proof of the non compacted gravel is verified by the County Engineers Office.

5. Education Credits

Maximum Credit: 50%

Structured Education Program

Education credits are provided to public and private schools (K through 12) for the purpose of providing water (Storm Water, flooding, water quality, and watershed management) type

education programs to students. To obtain this credit public and private schools would teach a water curriculum in each grade level. Programs such as **“Project Wet” and “Globe”** are an example of a spiral water-related curriculum that would provide a basis for credit in the various Lucas County School Districts.

Storm Water education credits of 50% of the Storm Water bill may be granted for approved programs providing public awareness and education on Storm Water issues as follows:

- This program is available to all schools as defined in the zoning code, public or private that offer a compulsory education curriculum for grades K through 12 or part thereof.
- Where a site is jointly used by a school and another use (e.g. church) the Storm Water fee will be prorated based on usage and the credit will be issued to the school portion of the fee;
- Water Quality Educational Curriculum for Public/private schools would utilize a water curriculum in grade levels to be determined. Appropriate guides to be used include *Project WET*, *GLOBE*, *Project WILD Aquatic*, and *Healthy Water, Healthy People*. Other water related materials may be utilized. This training in turn will be presented to 20% of the schools population.
- Project WET, Project Aquatic WILD, and/or GLOBE type programs should be integrated into standard curriculum for 20% of the students in the school (which equates into approximately one grade level);
- Schools will conduct at least one school-wide (20% or more which is approximately one grade level) awareness activity to be chosen from: water festival day, poster contest, or litter collection day. Additional opportunities include a stenciling project, brochure development, public service announcements, videos, or other projects as approved by County staff.
- In order to receive educational credits, the school will need to submit an application and provide supporting documentation. The application will be due by September 1st. The plan shall be reviewed and approved by the 6117 Storm Water District Manager. Once approved, the credit shall be placed on the appropriate Storm Water bill.
- Upon completion of the educational plan or no later than June 1 of each year which corresponds to the end of the school year, the school shall submit an annual report indicating compliance with the approved plan. The annual report shall be broken down by the types of activities and indicate the number of participants. If the school did not substantially comply with the plan, the report will include an explanation of the failure and any needed corrective action. Other reporting requirements may be required as part of the plan approval and shall be included in the annual report.
- The 6117 Storm Water District Manager will review the annual report. If upon review, the school did not substantially comply with the approved plan, the County may:
 - Require additional activities as a corrective action;
 - Reduce the education credit to a level comparable with the compliance;
 - Refuse approval of any new education plan.

Potential Storm Water Guides for the Education Credits

- Healthy Water, Healthy People - HWHP is an EPA approved curriculum and will give all the opportunity to create additional partnerships. The purpose of this publication is to raise educators' awareness and understanding of water quality topics and issues by demonstrating the relationship of water quality to personal, public, and environmental health. This publication gives teachers, students, nonformal educators, water managers, treatment plant operators and citizens an opportunity to explore water quality topics in an interactive, easy-to-use, hands-on format.
- Project WET (Water Education for Teachers) - Project WET is a nonprofit water education program and publisher for educators and young people ages 5 to 18. The

program facilitates and promotes awareness, appreciation, knowledge, and stewardship of water resources through the dissemination of classroom-ready teaching aids and the establishment of internationally sponsored Project WET programs.

- GLOBE (Global Learning and Observations to Benefit the Environment) - GLOBE is a worldwide hands-on, primary and secondary school-based education and science program. For students, GLOBE provides the opportunity to learn by taking scientifically valid measurements in the fields of atmosphere, hydrology, soils and land cover depending upon their local curricula. It also allows them to create maps and graphs on the free interactive web site to analyze data sets while collaborating with scientist and other GLOBE students around the world. You can visit the Globe website at <http://www.globe.gov/>
- Project WILD Aquatic - The *Project WILD Aquatic K-12 Curriculum and Activity Guide* emphasizes aquatic wildlife and aquatic ecosystems. It is organized in topic units and is based on the Project WILD conceptual framework. Because these activities are designed for integration into existing courses of study, instructors may use one or many Project WILD Aquatic activities or the entire set of activities may serve quite effectively as the basis for a course of study.

		<u>Available Credit</u>	<u>Credit Received</u>
School Educational Credit	1yr	50%	_____

Watershed Stewardship

Property owners are eligible for a Storm Water credit if they participate in an eligible, County approved local watershed stewardship event. To be considered as an eligible event, the event must be set up, organized, and executed through a partnership with citizens, local groups, county, and federal agencies and should be identified as a BMP for compliance with the Lucas County National Pollutant Discharge Elimination System (NPDES) Phase II Storm Water Permit. In general, eligible watershed stewardship activities will include community stream clean-ups via County approved organizations (such as Clean your Streams and Get the Lead Out clean up Events), and Adopt-A-Stream/Adopt-A-Road. Other eligible programs may be added to the County's NPDES Phase II Storm Water Program in the future. In order to receive credit for participation in an approved Adopt-A-Stream or Adopt-A-Road Program, the non-residential property owner will need to submit an application including application fee, and a request for roadway/stream designation. In order to receive credit for participation in a sanctioned cleanup program, the non-residential property owner will need to submit an application including application fee and tentative list of participants. Participants must register at the event and identify themselves as credit program participants. A single participant may be credited only to one Storm Water property tax bill.

Additionally, businesses can provide additional assistance in engaging and educating the public about the County's storm water program. Business owners that are willing to provide such services to the community will also be eligible for a credit. Eligible activities to receive the credit are at the discretion of the Lucas County 6117 Storm Water District and indentified as a BMP for compliance with the Lucas County National Pollutant Discharge Elimination System (NPDES) Phase II Storm Water Permit. Other eligible programs than those listed below may be considered if they assist with compliance with the County's NPDES Phase II Storm Water Permit. In order to receive credit for training/education/outreach efforts, the property owner will need to submit an application including application fee, and a description of the activity.

Adopt a Stream/Road	1 year	30%
Stream Clean Up Programs	1 year	30%
Water Festival Day	1 year	5%
Storm Drain Stenciling Program	1 year	5%
Poster Contest	1 year	5%
Brochure Development	1 year	5%
Essay Contest	1 year	5%
Public Service Announcement	1 year	5%
Litter Collection Day	1 year	5%
Multimedia	1 year	5%
County staff provide presentation for business facility	1 year	5%
Other: _____	1 year	5%

Submit Data, Application and Fee to:

Lucas County Engineer's Office
 One Government Center Suite 870
 Toledo, Ohio 43604
 Phone: (419) 213-4540
<http://www.co.lucas.oh.us/engineer/stormwaterutility>

Application Fee:

Applications received prior to December 31, 2012 will not require an application fee. After December 31, 2012, a \$250.00 application fee payable to the Lucas County 6117 Storm Water District will be required in order to process your credits application.

Part E : Final Requirements to Obtain Credit

- Step 1:** Construct the credit management facility in accordance with the approved plans, specifications, and design calculations and obtain an inspection of the credit management facility by the Lucas County 6117 Storm Water District / County Engineers Office Staff (District). Credit will become effective when the structure and/or credit requirements have been completed and operating properly as certified by the Lucas County 6117 Storm Water District staff.
- Step 2:** Provide an easement, deed restriction, or land purchase agreement that restricts the use of the property for anything but the intended management facility. Submit copy of recording instrument. (i.e. plat)
- Step 3:** Provide regular maintenance for the facility in accordance with the maintenance management plan

Step 4: Submit an annual management and maintenance report on each facility. At the discretion of the Lucas County 6117 Storm Water District / County Engineers Office Staff, inspections may be performed in order to confirm the operation and maintenance of the applied management practice or compliance with the approved management plan.

VI. Annual Reporting Requirements

Annual reporting is required by all credit recipients to maintain the service fee reduction. A letter or report that describes the status, operation and maintenance of each management practice is to be submitted to the Lucas County 6117 Storm Water District / County Engineers Office Staff no later than two weeks (14 days) following the anniversary date of the original credit award. Failure to submit the annual report will result in cancellation of the credit. In addition, the County reserves the right to periodically inspect the credited management practice to assure County requirements are being followed. The annual report will generally require the following information:

- Refer to and complete the application contained in the appendix at the end of this document
- Parcel Number located on the top right hand corner of the Real Estate Tax Bill statement
- Applicant statement certifying that the conditions under which the credit was originally issued have substantially remained the same;
- Applicant statement certifying that if structural management practices are receiving credit, they are being inspected and maintained within appropriate standards for the management practice;
- Summary of regular inspection results; and
- Summary of maintenance activities.

Submit Annual Maintenance Reports to:

Lucas County Engineer's Office
6117 Storm Water District
One Government Center Suite 870
Toledo, Ohio 43604
Phone: (419) 213-4540
<http://www.co.lucas.oh.us/engineer/stormwaterutility>
